DISPLAY
SAMSUNG ON DISPLAY

1 Presiding over a multitude of rooms, Samsung's R8 range provides visual quality for the entire household. Both the 87BDX/XE and 86WDX/XE models take up residence in varying sizes. Finite Solutions was careful in choosing these curvy LCDs, as they also boast some superb connectivity. Along with these Samsung displays situated throughout the house, a separate cinema room - complete with a Marantz DLP projector - stands tall as a fantastic theatre-evoking centre for family, friends and guests to congregate in.

SUPPORT RIG
AN IDYL CHOICE

»» Lying at the heart of this setup is iDyl's two-zone high-definition media server. Able to source media to every room in the house, multiple connection options enrich this hub's ease of use. Packing 400GB of storage space, everything from music, video and even family pictures can be seamlessly distributed in and around the home to the relevant media points. Completing this strong specification, a digital video node and DVD jukebox app provide visuals with the added bonus that iDyl's busy device can output video to a Full HD standard.

STANDOUT ITEM
POOL PARTY

»» Strung up with a thumping Bowers & Wilkins speaker rig, the grand finale of this waterworks' audio setup resides, ironically, in the pool room. Surrounded by Bowers & Wilkins' WM4 speakers, these unique models boast a weather proof spec that is perfectly suited to such a watery room. Built using corrosion-proof materials, a self-draining 'J' port has also been included in order to protect the all-important bass output.

REMOTE
CRESTRON CONTROL

3 Resident in both the kitchen and the home cinema, Crestron's TPMC-8 series serves many handy uses. For security this remote ties each of the house's key areas into the security system, giving access to CCTV images as well as gate entry. Featuring full touch capabilities, Wi-Fi wireless and even audio outputting, Crestron's tabletop duo convey well with the numerous Universal MX-900s also situated in this home setup.
